EDUCATION

The University of Tokyo

(2024.04 - 2026.09)

- Master of Information Science and Technology - Information Physics & Computing

Shandong University

(2019.09 - 2023.06)

- Bachelor of Engineering, Mechanical Engineering

EXPERIENCE

Trans-N.ai (Software Engineer Intern)

(2024.12 - 2025.10)

- **Built an LLM-powered full stack meeting summary web application:** Developed a fully localized full-stack system using **Python + FastAPI + React**, integrated **Dify workflows** into backend services for summary generation, and implemented paragraph-level click-to-edit summaries, tag/user management, meeting search, and file upload/download features.
- **Developed an full stack multimodal LLM information extraction solution** supporting video, PDF, PPT, and other formats. Designed a Python-based rate limiter combined with multi-process concurrency for batch OCR processing, achieving a **120% speed improvement** compared to Python multi-threading.
- **Optimized speech diarization performance:** Refactored speaker separation and clustering pipeline, achieving **3× speedup**, significantly reducing end-to-end meeting summary generation time.

LegalOn (Software Engineer Intern)

(2025.11 - 2026.01)

- **Implemented an emoji "like" feature for a legal case timeline**, developing the backend in **Go** with **gRPC**-based service communication and building the frontend using **TypeScript** and **React**.
- **Built a new Case Status Dashboard**, enabling users to quickly understand the current progress.

Macromill (Data Scientist Intern)

(2025.05 - 2025.07)

- Investigated the possibility and mathematical implications of applying factor rotation techniques to NMF components to improve interpretability of the extracted factors.

Project

Swama (Contributor)

High-performance machine learning runtime written in pure Swift, built on Apple's MLX framework and optimized for macOS (**500+ GitHub stars**). Contributed to the **command-line tooling**, implementing model create / list / remove features and enabling cross-origin support. <https://github.com/Trans-N-ai/swama>

Robotics Manipulator Motion Planning Algorithm

Implemented a fast algorithm for static obstacle avoidance in robotic manipulators using **Python** and **PyTorch**; the work was accepted to **ICRA 2026** (a top conference in robotics). https://github.com/Rin-Li/cdf_mppi

Diffusion Based Path Planning Algorithm

Implemented diffusion and flow matching model for path planning problem in the 2D plane using **Python** and **Pytorch**. https://github.com/Rin-Li/diffusion_motion

TECHNICAL SKILLS/QUALIFICATIONS

- **Programming Languages :** Python, C++, SQL (MySQL, PostgreSQL), Golang, TypeScript, Swift, Git
- **Languages :** TOEIC 870, TOEFL 93, JLPT N1
